1 constr-2.27 part2

Construct  $\triangle PQR$  with:  $\angle Q = 30^{\circ}, \angle R = 60^{\circ}$  and QR=4.7.

## 2 Solution

Note that  $\angle P = 180 - (\angle Q + \angle R) = 90^{\circ}$ 

That is, the  $\triangle PQR$  is a right angled triangle. Therefore, by Pythagoras Theorem , the sides of the triangle can be obtained by

$$PQ = QR * \cos 30 \tag{2.0.1}$$

$$PR = QR * \cos 60 \tag{2.0.2}$$

Let PQ=q and PR=r.Then the vertices of the triangle are  $\mathbf{P}=(0,0)$ ,  $\mathbf{Q}=(0,q)$ ,  $\mathbf{R}=(r,0)$ . Knowing all the vertices ,now we can construct the triangle.
